

Drum lifter - when lifting and carrying drums

Greater flexibility and efficiency - the drum lifter makes lifting and carrying of drums easy. The drum lifter can grip the drums from different run-in angles.

The drum lifter can quickly be fitted onto all Trans-positioners and Trans-Stackers with adjustable or fixed forks and fits the various fork styles offered by Interthor.

The Trans-Positioners and Trans-Stackers with adjustable forks can be fitted with a wide range of other optional extras such as a spear, platform, crane arm or drum turner.

Technical Specifications

The drum lifter has a maximum capacity of 550 lbs. and can lift and carry:

- Steel drums with lid (lid has to be on during handling) and with a capacity of 210 litres (EN 209)
- Steel drums with bung and a capacity of 216,5 litres (EN210)

The drum lifter can be fitted on all Trans-Positioner and Trans-Stacker models with a fork span of 22”.

Due to stability and safety a counterweight is required in some cases.

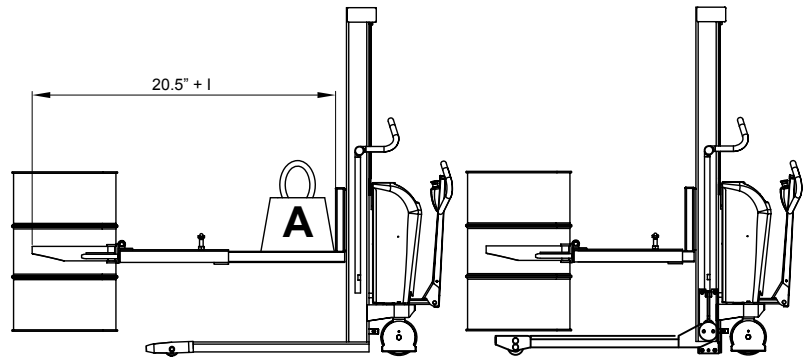

Very flexible handling situation - drums can be gripped from various run-in angles.

Drum turner - alternative when lifting, carrying and turning vertical or horizontal drums.

Drum forks - alternative when lifting and carrying horizontal drums.

The drum is lifted in front of the legs:
If the own weight (Trans-Positioner, Trans-Stacker) is below 550 lbs., a counterweight is required. The counterweight (A) has to weigh at least 55 lbs. and has to be fastened to the forks.

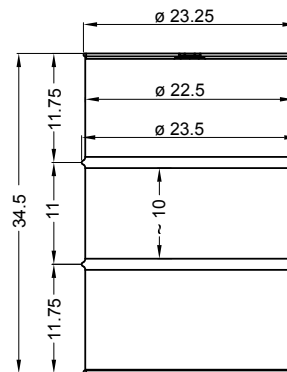

The drum is lifted between or above the legs:
A counterweight is not required.

The drum lifter fitted on a Trans-Stacker with fixed forks.

The drum lifter lifts a drum and places it in a lorry.

Standard steel drum (DS/EN 209 and DS/EN 210).
