

Custom-built products

Greater flexibility - in cooperation with the customer we solve the handling needs of the customer. Our development department are experts in adjusting our standard products to the specific needs of the customers.

We can offer a range of different materials, fork sizes and various lifting heights. Optional extras are also available. Technical specifications and functions can be changed in order to adjust the application options of the products.

Our Custom-built products are developed based on our very flexible standard range of products without compromising safety.

Technical Specifications

Through cooperation between the customer and our development department, the handling situation of the customer is solved with focus on ergonomics and safety. Only the laws of nature and the safety reasons define the limits!

The same rules and norms are valid for custom-built products as for standard products. For a period of 10 years Logitrans supports the custom-built product as regards construction, spare parts and product service.

How does it work? After receiving an enquiry from the customer and a description of the product and its application situation, the development department works out a sketch, to be approved by the customer before manufacturing.
